

JOB BOARD PLATFORM

Functional Requiriements:

1. The system shall allow a person to register itself as a user.
2. The system shall allow an organization to register itself as a company.
3. The system shall shall allow an admin to verify a registered company.
4. The system shall allow a company to post a job.
5. The system shall allow a company to set the job's status.
6. The system shall allow a company to update the application status.
7. The system shall allow a user to add skills to their profile.
8. The system shall allow a company to add skills on a job listing.
9. The system shall allow a user to filter jobs by location, employment type, salary range.
10. The system shall allow a company to filter users by their profile. (So they can search for a professional in a particular domain/skill)

Non-Functional Requirements:

1. A user must be able to search and filter jobs and receive results in near-real time, no matter if the number of job listings grows into the hundreds or thousands.
2. A user must be able to trust that their password is never stored or transmitted in plaintext, and that authentication is resistant to brute-force and credential-stuffing attempts.
3. A user must be able to use the platform with consistently high availability.
4. A user must be able to submit an application, list a skill, or post a job without service degradation, even during periods of high concurrent traffic.
5. A user must be able to assume their personal data (bio, years of experience, application history) is protected from unauthorized access by other users or external parties.
6. A user must be able to experience consistent data across the platform
7. A user must be able to access the platform on common browsers/devices without functional inconsistency

Domain Requirements:

1. Salary must be expressed as a range not a single figure (Minimum < Maximum always)
2. Applications must have a specific ordered review workflow. (pending → reviewed → shortlisted → rejected/accepted OR pending → reviewed → rejected)
3. Skills are a controlled vocabulary, not free text.
4. A Job cannot exist independent of a Company.

Inverse Requirements:

1. The system must never allow a User to apply to the same Job more than once.
2. The system must never allow two Users to register with the same email.
3. The system must never allow an Application to exist without a valid, existing User and Job verifying no orphaned records exist.
4. The system must never allow negative salary values, and never allow
Maximum_salary < Minimum_salary
5. The system must never expose or return raw/plaintext passwords in any response, log, or export
6. The system must never assign a fixed-set attribute, a value outside its defined enum
